

SHRINK WRAPPING MACHINE

- The actual process of shrinkage takes place in the shrink tunnel. The Product/pack loosely wrapped in shrinkable plastic film shrinks and gets tightly wrapped around the pack.
- The wrapping of the film round the product is done manually.
- It is an effective solution that holds the bottles together, using a shrunk plastic film with a bottom-tray to support them.
- The distinct advantage being the bottles are bound together in a compact fashion & are clearly visible. This adds to the aesthetic
- The machine is provided with a temperature controller which controls the heat at the point of application.
- The machine is equipped with safety guards & vents.
